

Industrial IoT Data Monitoring and Event Management Platform

Industry 4.0-Compliant Centralized Data Processing Architecture

Collect data from Industrial IoT sensors, PLC, and SCADA systems into a single centralized platform

- ✓ Process data and automatically generate event records.
- ✓ Detect unplanned production interruptions before they occur.

Integrations:

PLC&SCADA | REST API | ITSM Integration

Digital Ecosystem and Operational Value

iNFO IoT transforms field data into actionable business decisions

Decision Support and Management Enterprise Integration

- | | |
|---------------------------------|----------------------------|
| ✓ Real-Time KPI Monitoring | ✓ ERP |
| ✓ Trend Analysis | ✓ MES |
| ✓ Critical Threshold Monitoring | ✓ ITSM |
| ✓ Historical Event Analysis | ✓ CMMS |
| ✓ Performance Benchmarking | ✓ Extensible via REST APIs |

Smart Camera Systems Integration

- ✓ Smart camera systems operate with their own analytics infrastructure
- ✓ Generated alerts and outputs are integrated into the platform
- ✓ Visual verification enhances event reliability and operational security.
